Professional Summary

Senior ICT / Software Engineer with 5+ years of experience designing, deploying, and maintaining production systems across web platforms, automation, and AI-enabled workflows. I lead end-to-end delivery: translating business needs into scalable infrastructure, secure integrations, and reliable software that improves real operational procedures. Beyond engineering execution, I actively mentor new entrants into IT and software engineering, strengthening technical literacy and accelerating practical industry readiness.

Proven Impact:

- Delivered SEO-focused platforms and business web systems, including products that increased user traffic by **69%**.
- Improved AI/ML workflows through algorithmic optimization, clean data practices, and maintainable pipeline standards.
- Led onboarding and mentorship initiatives for new developers and contributors, improving adoption, clarity, and execution speed.

Core Engineering Capabilities

- **Systems Delivery & Ownership:** Own full delivery cycles from planning and architecture to deployment, maintenance, and continuous improvement.
- **Automation & API Engineering:** Design integrations that reduce manual operations, connect services reliably, and keep workflows consistent at scale.
- **Machine Learning & Data Engineering:** Strong command of ML frameworks and algorithmic thinking, with experience improving model performance and data reliability.
- **Web Platforms & Performance:** Architect and ship low-latency, SEO-driven platforms and backend-heavy applications built for growth and stability.
- **Cloud/Deployment Mindset:** Apply practical DevOps discipline with versioning, testing, reproducibility, and production reliability.
- **Leadership & Mentorship:** Mentor developers, guide contributors, simplify complex systems, and communicate clearly across technical and non-technical stakeholders.

Entrepreneurial Accomplishments

- **Built and deployed real-world web platforms:** [invisphere.com](#), [glowfmradio.com](#), [febluxury.com](#).
- **Engineered a fast media super-platform for radio:** Designed and implemented a unified publishing experience combining **news + blog + podcast + livestream** to support speed, retention, and global accessibility.
- **Designed a crypto trading simulation platform:** Built a simulation web application enabling traders to practice investing and portfolio-growth strategy without real-capital exposure.
- **Expanded IT education through mentorship:** Single-handedly mentored new participants entering IT, teaching practical software engineering fundamentals and improving real-world readiness.
- **Additional builds on GitHub/Render:** Multiple deployed projects hosted on Render with access links available through portfolio repositories.

Professional Experience

Software Engineer (AI Project Supervision) — Quivox

Nov 2024 – Present

Global (Remote)

- Spearhead AI project supervision, ensuring efficient development and implementation of machine-learning driven solutions.
- Engineer scalable software systems and web applications, improving backend performance, reliability, and user experience.
- Collaborate cross-functionally to integrate AI-driven insights into production software, driving measurable product improvements.

ICT Engineer / Social Media Manager / Video Producer — Glow99.1FM & GlowTVAkure

Jun 2025 –

Present

Nigeria

- Manage digital infrastructure and platform engineering for a modern radio station, supporting online broadcasting, system reliability, and digital growth.

- Lead cross-functional execution across web systems, streaming integrations, automation, and technical workflows that keep production and publishing consistent.
- Drive end-to-end social media and content operations as the station's Social Media Manager and Video Producer, translating programming and news into high-performing digital content.
- Produce short-form video, promos, show clips, branded creatives, and platform-ready assets for **Glow99.1FM** and **GlowTVAkure**, strengthening visibility and audience engagement.
- Coordinate content planning, publishing cadence, and community interaction, ensuring brand consistency and measurable traction across major social platforms.

Software Engineer & Bootcamp Trainer — iLLusThetics Digital Technologies

May 2020 – Jun 2025

Akure, Ondo State, Nigeria

- Built SEO-enhanced web products that expanded customer reach and improved digital visibility for SMEs.
- Developed a financial services platform that increased user traffic by **69%** through improved UX and performance-focused backend implementation.
- Designed a global-reach platform enabling event tracking, podcast streaming, and live consultation workflows for a religious organization.
- Delivered hands-on instruction in full-stack engineering, AI, data science, and game development, training and mentoring dozens of developers.
- Supported technical operations including hardware assembly, repairs, replacements, and troubleshooting during summer cohorts.

Machine Learning Engineer — Unify.ai (formerly Ivy Unify)

Nov 2023 – Mar 2024

Worldwide (Remote)

- Optimized model performance through improved algorithm selection and training strategy refinements.
- Streamlined ML pipeline scalability by maintaining reproducible development and deployment practices.
- Mentored contributors by simplifying workflows and documentation, accelerating onboarding and collaboration.
- Delivered **five successful open-source pull requests** improving system capability and reliability.

Data Science Research Assistant — Hugging Face

Jun 2022 – Sep 2022

Worldwide (Remote)

- Conducted Named Entity Recognition (NER) analyses across 50 case studies, improving entity extraction reliability via sequence labeling research.
- Enhanced data stability and convergence behavior through data normalization and feature engineering practices for generative model workflows.

Frontend Developer — Illusthetics

2019 – 2020

UI/UX Implementation and Responsive Design

- Built responsive user interfaces and improved UX flows through performance-focused front-end implementation.
- Collaborated with designers to implement clean UI systems, animations, and reusable components.
- Integrated frontend applications with backend APIs and supported testing workflows.

Certifications

- **AI Programming with Python Nanodegree (Udacity)** – AWS AI Programming Scholarship recipient (Silver Badge).
- **Complete Python Bootcamp: Zero to Hero (Jose Portilla)** – strong foundations in Python engineering and automation thinking.
- **Full Stack Web Developer** – end-to-end product delivery across frontend and backend systems.

Education

B.Sc. Computer Science

Adekunle Ajasin University

2017 – Mar 2024
